QAFX CFD-TRADING VIA FOREX COPIER

Thank you for choosing QAFX and welcome to our services for automatic trading with CFD. We give people the opportunity to benefit from our expert analysis and achieve consistent results in trading the markets. Expected average investment return is up to 15%* per month.

*Past performances or indicated monthly averages can not be a guarantee of the future incomes.

You have signed up for our monthly subscription. If this is your first time purchasing our services you need to do the following step-by-step guide. It is important that all steps are followed carefully.

We will guide you through what's required and how the VPS and Forex Copier are installed. Allow the installation to take up to two hours if you do not have previous experience with the programs. If you have any questions please contact webshop@qualityautomation.se. We are here to help and will reply within 24 hours.

TECHNICAL REQUIREMENTS

We suggest to run the softwares on a VPS (Virtual Private Server). The most safe and simple option. A VPS solution ensures that the computer is always on and connected. The VPS is an additional cost and not included in this subscription. Link to a service that we use ourselves (please use this affiliate link): <https://secure.fxvps.pro/aff.php?aff=191>

Another option is a computer with Windows 7-8 or 10. Preferably a laptop with battery back up or a desktop. The computer must have stable internet connection. If you use Mac the VPS-option is to prefer as Mac does not support all softwares.

If you decide to use a VPS by the affiliate link above -> Go to **VPS PLANS** in the top left corner of the menu. Then choose **Basic** or **Standard Plan Name** depending on what you need. We recommend the Standard Plan for our services. Press the blue button **Configure**. In the next step choose your **Billing Cycle** and then press **Continue**. Fill in your details and go to **Check Out**. You will receive an email with your IP adress and password which you will need in Installation Step 1.

INSTALLATION STEP 1

We recommend IC Markets trading service. IC Markets is one of the biggest CFD brokers with a revenue of about \$80billion per day.

Install Metatrader 4 on your computer or VPS, if you don not already have Metatrader 4 installed. To get your account approved you need to follow IC Markets requirements and upload necessary information such as copy of your passport and additional information.

Metatrader 4 download link:

<https://www.icmarkets.com/global/en/forex-trading-platform-metatrader/metatrader-4>

If you install Metatrader 4 on your VPS you can reach your VPS by searching for Remote Desktop Connection on your computer.

Click on Remote Desktop Connection. You will now see this window. Click 'Show Options'.

Insert your IP address xx.xx.xx.xx which you've received from FXVPS. Set user name to Administrator. Click Connect.

Insert your password which you've received in the same e-mail as your IP address.

You are now connected to your VPS! It looks and works just like a normal computer.

INSTALLATION STEP 2

Create a demo or live account with your MT4-provider (broker). We recommend to start with a demo account before trading with a live account.

Link to IC Markets demo account:

<https://www.icmarkets.com/sc/en/open-trading-account/demo>

Link to IC Markets live account:

<https://www.icmarkets.com/sc/en/open-trading-account/live>

INSTALLATION STEP 3

Download the Forex Copier application for receiving signals here:

<https://www.forexcopier.com/Download/DownloadLinkRemoteReceiver>

When the software is installed it will ask you for a password: xxxxx-xxxxx-xxxx. We will send you this password separately in an email within 24 hours after your registration on QAFX.

Download Forex Copier and start the program. Forex Copier will ask what MT folder to connect to. The correct folder should be default 'Program Files (x86) FXPIG'. If not, select the folder where your MT4 is installed.

Log in to Forex Copier with your email address and given password. Press 'Help' to find 'Log in'.

Settings have to be made in order for the program to work correctly. You do not have to do this manually, we have a default set-file created for this. You can find the set-file in the confirmation e-mail from us. Save the set-file at the desktop.

To install the set-file - press 'Options' - 'Terminal Options'

Press 'Default settings' to put all settings to Default. Save and finish.

If you want to know more about lot sizing and money management go to page 9.

Press 'File' - 'Save backup' - 'Save terminal and program settings'.

Go to your computer and find your hard drive.

Go to the folder 'Program Files (x86)':

Go to the folder 'ForexCopierRemote Receiver':

Go to the folder 'Backup':

Copy-paste the set-file into the folder.
IMPORTANT! The set-file you are pasting must be named receiverConfig in order to work.

You are done! Close the folder.

Go back to Forex Copier. Press 'File' and 'Load backup'

You can test if the connection is correct by pressing the button "Fix". The correct MT4 will then start. Press the button Start receiving signals.

This is what your Copier will look like when it's working correctly.

INSTALLATION STEP 5

Metatrader 4 settings. You can find the Expert Advisor settings by right-clicking in the chart and go to 'Expert Advisor'.

Then go to 'Properties' and the tab 'Common'. Check that the Expert Advisors settings are as follows:

Make sure that the Expert Advisor Receiver is applicated on the chart and shows a "happy smiley".

When everything is set it should look like this:

Also make sure Auto-Trading is activated by pressing the button. The green little icon should be visible. If it's red it's off.

MONEY MANAGEMENT

Know Your Risk Per Trade. We want to keep the money management as simple as possible. In other words, the risk per trade is the amount of your trading account that you're ready to lose on a single trade.

If you want to customize your total lot size per trade we recommend you to stake 0.01 lot/\$100. Which means \$500 invested is 0.05 lot per trade, in order to not risk more than 1%.

We recommend you to always start with fixed lot at 0.01 regardless of the size of your invested capital.

When you start to get familiar with our trading services you can increase the lot size according to explanation above.

Fixed lot size

The screenshot shows the 'Account setup' window with the 'Configuration' tab selected. The 'Use custom lot size' option is selected. Under 'Custom lot/risk management options', the 'Always use fixed lot for copied orders' option is selected with a value of 0.01. A red arrow points to this option. Other options include 'Use exact lot size from Source account', 'Proportional lot based on Source/Receiver Equity ratio', and 'Use risk management based on Stop Loss'. A 'Click to see examples' button is visible next to the fixed lot option.

Custom lot size

The screenshot shows the 'Account setup' window with the 'Configuration' tab selected. The 'Use custom lot size' option is selected. Under 'Custom lot/risk management options', the 'Proportional lot based on Source/Receiver Equity ratio' option is selected with a checkbox checked and a value of 1.00. A red arrow points to this option. A yellow callout box on the right provides test parameters: Source account Equity: 10000, Receiver account Equity: 500, Original lot on Source acc: 0.5, and Test result: Receiver account will open an order with 0.03 lot size. Other options include 'Use exact lot size from Source account', 'Always use fixed lot for copied orders', and 'Use risk management based on Stop Loss'.
